

Final Launch Blueprint

Pakistan Visual Creator Marketplace — Exact Admin Controls

Discover → Create → Save → Sell → Advertise → Earn

Production-ready admin specification covering content, users, creators, marketplace, advertising, revenue, payouts, fraud, moderation, permissions and emergency controls.

1. Dashboard

- Live KPIs: users, active users, creators, businesses, posts, assets, orders, GMV, ad spend, platform revenue, creator pool, pending payouts, refunds, reports and fraud alerts.
- Filters: today, 7/30/90 days and custom range.
- System health: storage, CDN, processing queues, failed jobs, payment status and critical alerts.
- Quick actions: approve monetization, review report, pause campaign, hold payout, remove content, suspend account.

2. User Management

- Search/filter by ID, username, email, role, status, signup date, activity and risk.
- Controls: view, verify, restrict, suspend, ban, restore and force logout.
- Roles: Viewer, Creator, Business, Moderator, Finance, Admin, Super Admin.
- All privileged actions create an immutable audit-log entry.

3. Posts & Moderation

- Queues: pending review, reported, copyright, spam and removed content.
- Controls: approve, hide, remove, restore, feature, unfeature, restrict visibility and lock comments.
- Bulk approve/remove/feature with confirmation.
- Keep moderation history; do not silently alter creator content.

4. Copyright & Assets

- Copyright claim queue with claimant, creator, asset, evidence and status.
- Controls: request evidence, disable, remove, restore, warn, strike and escalate.
- Configurable strike thresholds and license metadata.
- Revoke download access after removal/refund according to policy.

5. Creator Monetization

- Configurable criteria: account age, original posts, followers, qualified views, active days, engagement and policy status.
- Application states: pending, approved, rejected, suspended, appeal.
- Controls: approve, reject, request review, suspend/restore monetization, hold earnings.
- Never change earnings without reason and audit log.

6. Revenue Pool

- Set creator-pool percentage by revenue source/campaign category.
- Configure accounting periods and finalization dates.
- Preview distribution before publishing statements.
- Lock finalized periods; adjustments require reason, evidence and approver.

7. Advertising / Businesses

- Verify advertiser/business profiles.
- Campaign states: draft, pending review, active, paused, rejected, completed.
- Controls: approve, reject, pause, resume, terminate, budget cap, creative replacement and targeting restriction.
- Set allowed/prohibited categories, placements and frequency caps.
- Sponsored content must be clearly labelled.

8. Ad Inventory & Billing

- Configure feed, search, category and creator-page placements.
- Set minimum budget, daily limits, pricing/auction rules and frequency caps.
- Emergency pause for all ads or individual placements.
- Separate deposited, reserved, spent, refunded and chargeback balances.

9. Marketplace / Orders

- Order states: pending, paid, fulfilled/downloaded, refunded, disputed, chargeback.
- Controls: refund, partial refund where supported, freeze seller balance, unlock/revoke download and resolve dispute.
- Configurable commission; starting example 15% platform / 85% creator.
- Track order value, fees, creator share, payment fees and net settlement.

10. Pakistan Payouts

- Payout states: requested, verification hold, approved, processing, paid, failed, reversed.
- Configurable minimum withdrawal; starting example PKR 1,000.
- Controls: approve, reject with reason, hold, retry and reconcile.
- Use only payment/bank providers whose current marketplace payout and KYC capabilities are verified before launch.

11. Fraud & Risk

- Risk signals: unusual velocity, repeated sessions, referral abuse, fake purchases, suspicious downloads and abnormal engagement.
- Controls: flag, hold earnings, restrict monetization, limit reach, suspend, ban and release after review.
- Do not rely on a single IP signal because mobile/shared networks can share IPs.
- Version fraud rules so historical decisions remain explainable.

12. Reports & Safety

- Report types: spam, copyright, impersonation, harassment, prohibited content, fraud, scam and marketplace issue.
- Workflow: New → Investigating → Action Taken/Dismissed → Appeal where applicable.
- Assign cases to moderators and set priority/SLA.
- Store evidence, decision, moderator and timestamps.

13. Referrals

- Configure reward percentage, duration, cap and eligibility.
- Controls: pause program, invalidate fraudulent referral, claw back reward and block abuse.
- Keep referral rewards pending until quality/fraud checks pass.

14. Platform Settings

- Manage categories, tags, upload limits, file types, file sizes, image processing and visibility defaults.
- Manage monetization thresholds, commission rates, payout minimums, referral rules, ad rules and notifications.
- Feature flags for gradual rollout.
- Maintenance mode and emergency read-only mode.

15. Roles & Permissions

- Super Admin: full access including finance, roles and emergency controls.
- Admin: operational management excluding highest-risk security changes.
- Moderator: content/reports/copyright only.
- Finance: orders/revenue/refunds/payouts only.
- Ads Manager: advertisers/campaigns/placements/analytics only.
- Support: restricted user/order support.
- Use least privilege and stronger authentication for privileged accounts.

16. Audit Log

- Record logins/security events, role changes, moderation, payouts, revenue adjustments, campaigns, refunds, settings and emergency controls.
- Fields: event ID, admin ID, role, action, target, before/after summary, reason and timestamp.
- Append-only access for Super Admin/security personnel.

17. Emergency Controls

- Global pause uploads.
- Global pause asset purchases.
- Global pause creator payouts.
- Global pause advertising.
- Global pause monetization approvals.
- Disable specific creator, business, campaign, asset or payment method.
- Every emergency action requires confirmation, reason and automatic audit logging.

18. Admin Navigation

- Dashboard | Users | Creators | Businesses | Posts | Reports | Copyright | Assets | Orders | Monetization | Revenue | Payouts | Advertisers | Campaigns | Fraud | Referrals | Analytics | Settings | Roles & Permissions | Audit Logs

19. Launch Principle

- The admin panel is not simple CRUD; it is the control layer protecting money, content quality, advertiser trust, creator earnings and user safety.
- Launch MVP content + asset marketplace first. Add monetization and advertising in controlled stages after real traffic, fraud and revenue data are understood.

Final ecosystem: Viewer discovers → Creator publishes → Buyer saves/buys → Business advertises → Platform earns → Eligible creator receives revenue share → Admin controls and audits the ecosystem.
